SUMMARY

Results-driven Software Engineer with 5 years of experience specializing in backend development, system migrations, and scalable architecture design. Proven success in modernizing legacy systems, including migrating Athenahealth's core functionalities from Perl to Java, significantly improving performance and team productivity. Skilled in designing microservices architectures, automating workflows, and optimizing infrastructure costs. Known for collaboration, problem-solving, and delivering high-impact solutions in fast-paced environments.

TECHNICAL SKILLS

Languages: Java, C#, Python, MySQL, MS-SQL, NoSQL, GraphQL, JavaScript, Angular, React, HTML5, CSS
Framework, Tools & Source Control: ASP.NET, JUnit, Selenium, MongoDB, Node.js, Sitecore, Glass Mapper, Azure, Apache SOLR, Jenkins, Elasticsearch, NetBeans, PyCharm, Visual Studio, Weka, Docker, Bitbucket, GIT, JIRA, SourceTree
Interpersonal Skills: Communication, Organizational, Presentation Skills, Problem solver, Self-motivated, Collaborative, Written

WORK EXPERIENCE

Athenahealth, Inc, Member of Technical Staff **Jun 2022 - June 2024**

- Led the migration of critical features from a **Perl-based legacy** system to a **Java-based architecture**, reducing system **downtime** by **20%** and improving overall **system stability**.
- Established and enforced code review processes, leading to a **30%** reduction in production defects and fewer support tickets, enhancing the software development lifecycle.
- Created a **Java-based scaffolding** tool to automate project module generation, reducing project setup time by **50%** and enabling faster delivery of critical milestones.
- Designed and implemented a **scalable microservices architecture** on **Azure**, integrating **REST APIs** with Azure Service Bus and Azure Functions. Delivered a 25% reduction in infrastructure costs while enhancing system performance for core patient management functionalities.
- Developed a **MockServer API** tool that removed server dependencies**, accelerating development cycle time by 25%** and minimizing delays caused by server downtime.
- Designed a streamlined workflow system for **Pre-admission** and **Procedure Reasons** for Visit, **reducing onboarding time** for new users by **40%** and improving process management for healthcare providers.
- Reduced **GraphQL** service downtime by **25%** through the implementation of proactive monitoring with **AWS CloudWatch alarms, Prometheus rules, Grafana dashboards,** and **SNS alerts**, leading to faster *incident detection* and *resolution*.
- Mentored **10+ interns** through structured knowledge-sharing sessions and hands-on troubleshooting guidance, resulting in a 40% decrease in support queries and a 25% improvement in development velocity.

Rochester Institute of Technology, Software Developer Co-op **Sept 2021 - Dec 2021**

- Collaborated on the design & development of a student-created university payment portal for the service department, improving payment processing capabilities & user experience.
- Played a key role in developing, deploying, & maintaining software solutions using **Java, Angular** & **Spring Boot**, ensuring high system performance & timely resolution of issues.

Copart, Inc, Software Engineering Intern **Jun 2021 - Aug 2021**

- Engineered secure, end-to-end web applications for Copart's Auto Program using **Java, Spring Boot, Kafka,** and **Apache Solr**, enhancing user responsiveness and security, optimizing user experience for millions of customers.
- Built a proof-of-concept application leveraging **KStreams** to transform events and triggers into **KTables** and **GlobalKTables**, driving an **80%** improvement in business performance through real-time data processing.

Rochester Institute of Technology, Undergraduate Teaching Assistant **Aug 2020 - Dec 2021**

- Mentored and coached over 50 students in **foundational Python** programming and data structures, cultivating confidence and skill in technical problem-solving among **first-time programmers**.
- Demonstrated advanced problem-solving skills and expertise in **data structures** by effectively teaching and passing on these concepts to students.
- Designed, developed, and deployed a web application for creating, uploading, and grading assignments using **Java, HTML, CSS, JavaScript,** and **MySQL**, streamlining academic workflows and improving efficiency for educators and students.

GeekHive, Full Stack Engineer Intern **Jan 2020 - Apr 2020**

- Designed and implemented a **Sitecore-based carousel application** for the **American Society of Hematology (ASH)**, delivering a faster and more reliable report search system.
- Leveraged **Apache Solr** for real-time indexing, enabling efficient searches across 500+ reports and improving application performance by 75%.
- Migrated data from **MySQL** to **MongoDB** using **MongoHub**, enhancing system scalability and ensuring efficient storage and retrieval of reports.

Accenture, Application Development Associate **Nov 2016 - Jun 2018**

- Engineered a robust automation solution using **C#, ASP.NET MVC,** and **SQL** to scrape test data from generated reports and produce customizable outputs, eliminating manual processes and improving efficiency by **85%**.

PROJECTS

Spring Boot ChatGPT API Integration | Java, Spring Boot, REST API, OpenAI API, JSON, Maven **Feb 2025**

- Developed a **ChatGPT-powered chatbot API** using **Spring Boot**, enabling real-time conversational responses with sub-500ms latency via **asynchronous API calls**.
- Designed a modular controller-service architecture with **DTOs** for **structured request/response** handling, enhancing maintainability and scalability.
- Secured API communication with **Bearer Token** authentication and implemented request/response logging for debugging, monitoring, and future optimizations.

Mocker | Java, MockServer API, OpenAPI **Jan 2023**

- Utilized **MockServer API** and **Java** to create a mock server, enabling developers to test and simulate API responses without running a real-time server, significantly improving development efficiency.
- Incorporated **match, no-match actions** with supporting **HTTP status codes** and enriched the tool with **OpenAPI v3 Specification** by implementing a **request-response matching algorithm**, ensuring *accurate* and *efficient* **API testing**.

Scaffolding tool | Java **Dec 2022**

- Created a **Maven-based** command-line **Scaffolding** tool using **Java** to dynamically generate a set of files forming the basic project structure. This tool enabled developers to rapidly create working models, boosting productivity by **30%**.
- Designed functionality to generate new modules from a module repository and integrate them into existing repositories based on module names and user-provided resources, streamlining development workflows and reducing setup time.

Book Catalog| C#, Microsoft .NET Core, MVC, HTML, CSS, JavaScript, jQuery **Nov 2021**

- Designed and developed a **C#** application using the **Microsoft .NET Core** framework which reads a **JSON** file displaying its content as a catalog.
- Incorporated **filtering, searching, sorting,** and **pagination** on custom attributes.
- A book review feature where reviews can be added, stored in local storage, and retrieved on the same button click using **JavaScript**.

EDUCATION

Rochester Institute of Technology - *M.S. Computer Science* **Aug 2018 - May 2022**
